In graph theory, a regular graph is a graph where each vertex has the same number of neighbors; i.e. every vertex has the same degree or valency. A regular directed graph must also satisfy the stronger condition that the indegree and outdegree of each vertex are equal to each other. A regular graph with vertices of degree  $k$  is called a  $k$ -regular graph or regular graph of degree  $k$ .

In the theory of formal languages, the pumping lemma for regular languages is a lemma that describes an essential property of all regular languages. Informally, it says that all sufficiently long words in a regular language may be pumped—that is, have a middle section of the word repeated an arbitrary number of times—to produce a new word that also lies within the same language.
