Future Applications of Biotechnology to the Energy Industry

Biotechnology is still a relatively new field with great potential for driving medical progress. Much of that progress is likely to result from advances in personalized medicine. This new treatment paradigm aims to ensure that patients get the therapies best suited to their specific conditions, genetic makeups, and other health characteristics.

What Does the Future of Biotechnology Therapies Look Like

Biotech works because there is one language of life: human genes work in bacteria, monkey genes work in mice and earthworms. Tree genes work in bananas and frog genes work in rice. There is no limit in theory to the potential of Biotech. Biotech has given us the power to alter the very basis of life on earth.
