In computer science, a problem is said to have optimal substructure if an optimal solution can be constructed from optimal solutions of its subproblems. This property is used to determine the usefulness of dynamic programming and greedy algorithms for a problem. Typically, a greedy algorithm is used to solve a problem with optimal substructure if it can be proven by induction that this is ...

CS-102 Logical Organization of Computers . Aims There are two views of computer architecture. The traditional view, dating back to the IBM System/360 from the early 1960's, is that the architecture of a computer is the programmer-visible view of the machine, while its implementation is the province of the
