A tsunami can kill or injure people and damage or destroy buildings and infrastructure as waves come in and go out. A tsunami is a series of enormous ocean waves caused by earthquakes, underwater landslides, volcanic eruptions, or asteroids. Tsunamis can travel 20-30 miles per hour with waves 10-100 feet high. Cause flooding and disrupt transportation, power, communications,

### **Tsunamis | Ready.gov**

A tsunami (from Japanese: 津波, "harbour wave"; English pronunciation: /səˈnuːmi/ or /tsuˈnaɪmi/ or tidal wave), also known as a seismic sea wave, is a series of waves in a water body caused by the displacement of a large volume of water, generally in an ocean or a large lake. Earthquakes, volcanic eruptions and other underwater explosions (including ...

An earthquake (also known as a quake, tremor or temblor) is the shaking of the surface of the Earth, resulting from the sudden release of energy in the Earth's lithosphere that creates seismic waves. Earthquakes can range in size from those that are so weak that they cannot be felt to those violent enough to toss people around and destroy whole cities.
