Permeability in fluid mechanics and the earth sciences (commonly symbolized as  $k$ ) is a measure of the ability of a porous material (often, a rock or an unconsolidated material) to allow fluids to pass through it.. The permeability of a medium is related to the porosity, but also to the shapes of the pores in the medium and their level of connectedness.

Araldite 502 Embedding Kits. The Araldite 502 kit with BDMA accelerator is equally efficient as the same kit using DMP-30. BDMA has a lower viscosity and diffuses more rapidly into tissues, porous specimens and rough surfaces.

This webinar series will feature individual research projects funded by the NIEHS Superfund Research Program (SRP). In 2013, the SRP initiated a targeted research program to better understand how contaminants in the environment are affected by complex biological, geological, and chemical processes. By understanding these complex interactions, we are better equipped to optimize remediation ...

Hydraulic fracturing (also fracking, fraccing, frac'ing, hydrofracturing or hydrofracking) is a well stimulation technique in which rock is fractured by a pressurized liquid. The process involves the high-pressure injection of 'fracking fluid' (primarily water, containing sand or other proppants suspended with the aid of thickening agents) into a wellbore to create cracks in the deep-rock ...

The objective of the Journal of Petroleum Science and Engineering is to bridge the gap between the engineering, the geology and the science of petroleum and natural gas by publishing explicitly written articles intelligible to scientists and engineers working in any field of petroleum engineering, natural gas engineering and petroleum (natural gas) geology.
