An inertial frame of reference in classical physics and special relativity is a frame of reference in which a body with zero net force acting upon it is not accelerating; that is, such a body is at rest or it is moving at a constant speed in a straight line. In analytical terms, it is a frame of reference that describes time and space homogeneously, isotropically, and in a time-independent manner.

When a sinusoidal alternating current (AC) is passing through a linear inductance, the induced back-EMF will also be sinusoidal. If the current through the inductance is $i = I_m \sin(\omega t)$, from (1) above the voltage across it will be $v = [L \frac{di}{dt}] = L \omega I_m \cos(\omega t) = L \omega I_m \sin(\omega t + \frac{\pi}{2})$ where I_m is the amplitude (peak value) of the sinusoidal current in amperes, ω is the angular frequency of the alternating current, with $\omega = 2\pi f$ being ...
