Wastewater treatment is a process used to convert wastewater into an effluent that can be returned to the water cycle with minimum impact on the environment, or directly reused. The latter is called water reclamation because treated wastewater can then be used for other purposes. The treatment process takes place in a wastewater treatment plant (WWTP), often referred to as a Water Resource ...

1. Introduction. Advanced oxidation technologies that use the catalytic activity of semiconducting metal oxides in combination with energy of light have been studied since early 70s of the last century when the electrochemical photolysis of water was reported by Fujishima and Honda.
