Reporting of observational research is often not detailed and clear enough to assess the strengths and weaknesses of the investigation. To improve the reporting of observational research, we developed a checklist of items that should be addressed: the Strengthening the Reporting of Observational Studies in Epidemiology (STROBE) Statement (). ...

As a rule of thumb, the optimum circumference of a multi-band STL is about  $0.15 \lambda$  of the lowest operating frequency. With an appropriate variable capacitor, the resonance frequency of an STL can be tuned over a frequency range that covers at least two octaves (= factor 4x). However, from an antenna efficiency point of view, a factor of 2-3 is probably the practical limit.

No wonder the two-unit one didn't work in my airplane...and the airplane one failed the test for a two-unit type. The Delco Service Manual for the Three-Unit regulator says, "Regulators covered in this bulletin are most often used on aircraft and 24-volt applications." This leads to one problem: because the three-unit regulator has a current limiter circuit, there's no such thing as a ...
