Numerical methods John D. Fenton a pair of modules, Goal Seek and Solver, which obviate the need for much programming and computations. Goal Seek, is easy to use, but it is limited with it one can solve a single equation, however complicated or however many spreadsheet cells are involved, whether the equation is linear or nonlinear.

The simplex algorithm operates on linear programs in the canonical form. maximize $z = c_1x_1 + c_2x_2 + \dots + c_nx_n$ subject to $a_{11}x_1 + a_{12}x_2 + \dots + a_{1n}x_n = b_1$ and $a_{m1}x_1 + a_{m2}x_2 + \dots + a_{mn}x_n = b_m$ with $x_j \geq 0$, $b_i \geq 0$, the variables of the problem, c_j the coefficients of the objective function, a $m \times n$ matrix, and b_i nonnegative constants. There is a straightforward process to convert any linear program into one in standard form, so using this form of ...

In mathematics, computer science and operations research, mathematical optimization (alternatively spelled optimisation) or mathematical programming is the selection of a best element (with regard to some criterion) from some set of available alternatives.. In the simplest case, an optimization problem consists of maximizing or minimizing a real function by systematically choosing input values ...

Linear Programming Linear programming is often a favorite topic for both professors and students. The ability to introduce LP using a graphical approach, the relative ease of the solution method, the widespread availability of LP software packages, and the wide range of applications make LP accessible even to students with relatively weak mathematical backgrounds.
